ABOUT THIS REPORT

Introduction & Analysis Scope

Identify qualification opportunities that warrant further investigation by combining UCO market research with UCO's inventory of courses and qualifications.

The report supports qualification opportunity discovery, evidence review and further investigation across UC Online's portfolio.

Analysis scope

ANALYSIS TYPE
Full portfolio analysis

STUDY LEVEL
All

CITIZENSHIP
All

EVIDENCE ACCESS
No web access

Main areas of analysis

The analysis brings together UCO market research, portfolio and course information, and qualification information within the selected scope.

01 **Market & learner demand**
Market demand, learner interest, workforce need and relevant skills or capability signals.

02 **Competitive landscape**
Relevant qualification provision, competitor presence and market positioning identified in the available evidence.

03 **Portfolio fit**
Existing course capability, portfolio overlap, course alignment and confirmed reusable coverage.

04 **Development & feasibility**
Capability gaps, qualification structure, development requirements and areas requiring further validation.

Analysis approach

Market evidence is reviewed first, followed by learner and workforce need, competition, required graduate capabilities, portfolio overlap, course alignment, development gaps and qualification feasibility. Recommendations highlight areas that warrant further investigation and validation.

Interpreting the findings

Evidence strength, competitive context, confirmed portfolio coverage and development need provide complementary perspectives on each opportunity. Together, they show where market potential aligns with existing UC Online capability and where further development or validation may be required.

Uncertainty and areas requiring validation are highlighted where the available evidence does not support a firm conclusion.

OPPORTUNITY OVERVIEW

Qualification Opportunity Matrix

Evidence
Strength of the available market and supporting evidence for the opportunity.

Competition
Relative competitive presence identified in the supplied evidence.

Confirmed coverage
Relevant course points confirmed from the supplied UC Online portfolio data.

Development
Indicative level of additional capability development required to support the opportunity.

RANK	OPPORTUNITY	EVIDENCE	COMPETITION	CONFIRMED COVERAGE	DEVELOPMENT
1	**Applied, non-clinical Psychological Science** Extension Opportunity Master's · Level 9 · 180 points	Strong	NZ: Moderate–High / AU: High	75 pts · 41.7%	Moderate
2	**Professional Engineering** Extension Opportunity Master's · Level 9 · 180 points	Strong	NZ: Limited / AU: Moderate	65 pts · 36.1%	Significant
3	**Public Health** New Opportunity Master's · Level 9 · 180 points	Moderate	NZ: High / AU: High	0 pts · 0.0%	Significant
4	**Professional Accounting** New Opportunity Master's · Level 9 · 180 points	Moderate	NZ: High / AU: High	15 pts · 8.3%	Significant
5	**Business Information Systems** Extension Opportunity Master's · Level 9 · 180 points	Moderate	NZ: Moderate / AU: Moderate–High	55 pts · 30.6%	Moderate
6	**Digital Health / Health Information Management** Extension Opportunity Postgraduate Diploma · Level 8 · 120 points	Moderate	NZ: Moderate / AU: High	40 pts · 33.3%	Moderate
7	**Illustrative — Sustainability and Climate Leadership** New Opportunity Master's · Level 9 · 180 points	Moderate	NZ: Moderate / AU: Moderate	30 pts · 16.7%	Significant
8	**Illustrative — Education Technology and Learning Design** Extension Opportunity Postgraduate Diploma · Level 8 · 120 points	Weak	NZ: Limited / AU: Moderate	45 pts · 37.5%	Moderate

PORTFOLIO OVERVIEW

Portfolio Composition & Readiness

The supplied UC Online course portfolio is shown by subject area and lifecycle status, with capability signals from the validated analysis.

On Hold NOT CONFIRMED	24	

PORTFOLIO CAPABILITY SIGNALS

Reusable capability

Digital and data governance capability can support MBIS and Digital Health; applied research capability is reusable in some contexts; and engineering professional-practice courses provide an existing foundation. These capabilities support opportunities but do not replace domain-specific programme cores.

Recurring development gaps

Level 9 integrative and capstone capability recurs as a gap, while domain-specific professional cores remain a major constraint. Broad adjacent course availability should not be treated automatically as qualification capability.

HIGH-LEVERAGE DEVELOPMENT AREAS

Data governance & implementation

Advanced data governance and implementation capability in regulated professional contexts could support opportunities such as MBIS and Digital Health, provided the domain context is preserved.

Applied research & evaluation

Advanced applied research and evaluation capability could support multiple professional pathways where the capability remains flexible enough to operate across different domains.

DECISION OVERVIEW

Executive Summary

Six New or Extension Opportunities warrant further consideration. Applied, non-clinical Psychological Science presents the strongest balance of market evidence and existing portfolio capability; Professional Engineering shows strong workforce need but requires substantial technical and accreditation validation; Public Health has a credible New Zealand market signal but currently lacks confirmed advanced portfolio coverage.

#1

Applied, non-clinical Psychological Science

EVIDENCE
Strong

PORTFOLIO COVERAGE
41.7%

Best balance of credible demand and reusable existing portfolio capability.

REUSE-LED EXTENSION

Meaningful existing foundation

Existing UCO capability reduces the scale of new development, although additional domain-specific capability is still required.

#2

Professional Engineering

EVIDENCE
Strong

PORTFOLIO COVERAGE
36.1%

Strong workforce case, with technical formation and accreditation the principal constraints.

PROFESSIONALLY CONSTRAINED

Feasibility depends on external requirements

Existing capability supports the opportunity, but accreditation, professional recognition and technical formation materially affect feasibility.

#3

Public Health

EVIDENCE
Moderate

PORTFOLIO COVERAGE
0.0%

Credible New Zealand market opportunity, but substantial new advanced capability is required.

MARKET-LED BUILD

Credible opportunity, limited portfolio readiness

Market evidence supports further investigation, but limited confirmed coverage means substantial new domain-specific development is required.

SHORTLISTED OPPORTUNITY PROFILES

APPLIED, NON-CLINICAL PSYCHOLOGICAL SCIENCE

PROFILE 01

EXTENSION OPPORTUNITY

> Applied, non-clinical Psychological Science combines credible New Zealand postgraduate growth and broader online psychology interest with a meaningful UC Online foundation in psychology research, evaluation and wellbeing. Under current lifecycle and capability rules, 75 of 180 points are confirmed relevant (41.7%). The opportunity remains an extension rather than a near-complete reuse case and must be differentiated clearly from Organisational Psychology and registration-oriented pathways.

WHY IT STANDS OUT

Domestic Level 8/9 behavioural-science study and Applied Psychology EFTS show positive recent growth, while broader international psychology interest remains substantial. The strongest demand evidence is broader than this exact non-clinical concept, so positioning and differentiation remain important.

EXISTING FOUNDATION

OPSY619, OPSY622 and OPSY630 provide 75 confirmed points across wellbeing, research methods and applied research. They offer a useful foundation, but most existing Organisational Psychology content is not counted because it would not establish a distinct broader pathway.

DEVELOPMENT / VALIDATION NEEDED

The concept must establish a distinctive advanced non-clinical psychology spine beyond organisational settings and must not imply clinical or psychologist-registration outcomes that are not supported by the evidence.

NEXT VALIDATION STEP

Confirm with Psychology and portfolio stakeholders that the proposed broader non-clinical pathway can be differentiated clearly from Organisational Psychology and current psychology pipeline products before curriculum design proceeds.

Market Research_MS of Psy Scien_June 2026.pptx — slides 3–9 • 08072025_Market Insights report for University of Canterbury (Final).pdf — pp. 20–23, 57–63 • course_catalog.jsonl — OPSY619; OPSY622; OPSY630

SHORTLISTED OPPORTUNITIES · CONTINUED

PROFESSIONAL ENGINEERING

PROFILE 02

EXTENSION OPPORTUNITY

> Professional Engineering has the strongest workforce-led case, supported by a regional supply gap, postgraduate growth and professional-engineering demand. UC Online confirms 65 of 180 relevant points (36.1%) through engineering-management, sustainability, technology application and project capability. A viable professional pathway still requires discipline-specific technical formation, accreditation or professional-recognition mapping and practical requirements.

WHY IT STANDS OUT

Supplied research identifies sustained professional-engineering need, a regional online supply gap and stronger exact-title awareness in Australia than New Zealand. The case is strongest as a workforce and professional-formation opportunity rather than as an exact-title search-demand opportunity.

EXISTING FOUNDATION

EMGT602, EMGT605, EMGT606 and EMGT610 provide 65 confirmed points in engineering research, sustainability, technology application and project practice. They form a useful professional foundation but do not replace discipline-specific engineering science and design.

DEVELOPMENT / VALIDATION NEEDED

Discipline-specific technical formation, accreditation or professional recognition, and practical or applied engineering requirements are not established by the current portfolio and require formal validation.

NEXT VALIDATION STEP

Validate the accreditation pathway, discipline-specific technical requirements and practical or online-practicum expectations before determining the feasible qualification structure.

SOURCES

taught_MProfEng_research.pptx — slides 3–8 • Keyword Overview_Master of Professional Engineering.pptx — slides 3–5; slide 8 • course_catalog.jsonl — EMGT602; EMGT605; EMGT606; EMGT610

PUBLIC HEALTH

PROFILE 03

NEW OPPORTUNITY

> Public Health has a credible New Zealand search and enrolment signal but established competition. Under conservative lifecycle rules, UC Online confirms 0 of 180 relevant points (0%); adjacent Health provision and Not Started or On Hold courses do not form an advanced Public Health pathway. A Level 9 offer needs a coherent core in epidemiology, biostatistics, policy, equity and applied research.

WHY IT STANDS OUT

New Zealand qualification-search and enrolment evidence provides a credible learner-interest signal, while established New Zealand and Australian provision confirms a mature competitive context. Australian and international online learner demand is less directly established by the supplied evidence.

EXISTING FOUNDATION

Relevant Public Health, policy, equity, research and health-planning courses are present in the wider supplied catalogue, but the most directly aligned courses are Not Started, On Hold or require level and capability validation, so none are counted as confirmed coverage.

DEVELOPMENT / VALIDATION NEEDED

A coherent advanced pathway requires epidemiology, biostatistics, public-health policy and systems, Hauora Māori and equity, health promotion, planning, evaluation and applied-research capability that is not currently confirmed.

NEXT VALIDATION STEP

Complete an academic capability map to establish the scale of new Level 8/9 epidemiology, biostatistics, health-promotion, policy, equity and applied-research development required.

SOURCES

Market Research_MS of Public Health_August_2026.pptx — slides 3, 11–14, 21 • MPH NZ_AUS_INTL Analysis.xlsx — Sheet1 rows 6–30 • course_catalog.jsonl — PUBH421; PUBH422; HLTH464; HLTH302; HLTH312

APPENDIX A · DETAILED QUALIFICATION OPPORTUNITIES

A1

Applied, non-clinical Psychological Science

RELATIONSHIP	TYPE / LEVEL	EVIDENCE
Extension Opportunity	**Master's · L9 · 180 pts**	**Strong**
CONFIRMED COVERAGE	**DEVELOPMENT**	**RECOMMENDATION**
75 / 180 pts · 41.7%	**Moderate**	**Recommended for further investigation**

Opportunity overview

The opportunity is a Level 9 applied Psychological Science qualification focused on non-clinical use of psychological science across behavioural insights, programme evaluation, public policy, community and health-promotion programmes, user/consumer research and organisational or people analytics. The concept warrants consideration because supplied New Zealand evidence shows growth in Level 9 behavioural-science study and applied psychology, while the global online market continues to show substantial psychology interest.[1][2]

This concept should not be framed as a route to psychologist registration unless separate authoritative evidence establishes that outcome. The supplied market research itself distinguishes the opportunity from clinical and registration-oriented psychology.

Market evidence

NEW ZEALAND

Domestic Level 8 and Level 9 behavioural-science enrolments grew between 2021 and 2025, with the supplied report stating Level 9 enrolments increased by 35.7%. Applied Psychology EFTS increased from 21.3 in 2021 to 56.5 in 2025. The report also identifies strong progression to higher study among working-age learners, particularly those aged 25–39 in behavioural science.[3]

AUSTRALIA

Australia has an established applied/non-clinical postgraduate psychology market, including online and flexible competitors. The competitor scan identifies AUT as the closest NZ online applied-psychology competitor and several Australian applied/business/positive/coaching psychology offers, some fully online.[4]

INTERNATIONAL

The Studyportals corpus identifies Psychology as a recurring area of Master's-level demand, including a +10.9% change in relative demand in the 2024–25 comparison and strong programme interest across multiple recruitment markets.[2]

Competition

NEW ZEALAND
Moderate–High

AUT offers a 100% online Master of Applied Psychology; Massey offers distance/online MSc Psychology; Waikato offers a Master of Applied Psychology; UC itself already offers the online Master of Organisational Psychology.[5]

AUSTRALIA
High

The supplied scan identifies applied, business, coaching and positive-psychology postgraduate programmes across Melbourne, Sydney, Queensland, UWA, Newcastle, ECU and CQUniversity. Differentiation therefore needs to be capability-led rather than title-led.[6]

Skills & technology

The supplied market research identifies non-clinical career clusters in policy/advisory work, behavioural insights, programme design and evaluation, organisational development and people analytics, consumer/market/user research, and community or health-promotion programmes.[7]

Green List

no Green List alignment is claimed for this concept. Although Organisational Psychologist (272313) is Tier 1, the supplied Green List requirement is registration with the Psychologists Board of Aotearoa New Zealand, and the proposed broader non-clinical qualification is not established by the supplied evidence as a registration pathway.[8]

Target learner

Target learners are graduates or professionals seeking advanced non-clinical behavioural-science capability rather than clinical registration.

Evidence assessment

Strong

The market case is supported by domestic enrolment evidence, current search evidence, competitor evidence and an independent broader online-demand source. The main limitation is that much of the strongest psychology demand includes clinical or generic psychology searches that cannot automatically be transferred to a non-clinical applied qualification.

A1 · APPLIED, NON-CLINICAL PSYCHOLOGICAL SCIENCE

PORTFOLIO & FEASIBILITY

RECOMMENDATION

Recommended for further investigation

Proceed to a formal differentiation workshop with Psychology and portfolio stakeholders before curriculum design. The first decision should be whether the target outcome is sufficiently distinct from Organisational Psychology and current psychology pipeline products.

Key concerns

Validation Required

The concept must be differentiated clearly from Organisational Psychology and must not imply a psychologist-registration pathway.

Validation Required

Broader advanced non-clinical capability and a distinct capstone are not yet established.

Existing course alignment[9]

COURSE / POINTS / STATUS	CAPABILITY ALIGNMENT
OPSY619 15 pts · Build Complete — current Psychology of Stress, Health and Wellbeing	Applied wellbeing and behavioural analysis; relevant beyond workplace contexts with validation
OPSY622 15 pts · Build Complete — current Research Methods for Org Psych	Strong research-question, methods, ethics and mixed-method capability
OPSY630 45 pts · Build Complete — current Research Project	Independent applied research, literature analysis and communication; organisational setting may limit transfer

Alignment notes

Other MOrgPsyc courses are not counted because their supplied outcomes are primarily organisation-specific and counting the full 180-point existing programme would effectively reproduce the BAU qualification.

Portfolio coverage

41.7% **75 / 180 points**

Confirmed relevant coverage

0% 100%

Capability coverage

strong for applied research and wellbeing; incomplete for broader behavioural science, policy/community application, user/consumer research and non-organisational intervention/evaluation.

Coherence

a new concept cannot simply combine the selected courses without new advanced applied-psychology content and a distinct qualification purpose.

Key development gaps

Broader applied psychology beyond organisational contexts

Current coverage is concentrated in organisational psychology. Evidence supports behavioural insights, programme evaluation, policy, community and user/consumer applications.[7]

Development: indicative advanced provision in broader applied psychological science and behaviour-change/evaluation contexts.

Confidence: high that the gap exists; exact academic structure requires Psychology review.

Distinctive advanced pathway and capstone

OPSY630 is an organisational-setting project.

Development: determine whether it can support a broader applied-psychology project or whether a new capstone/research option is needed.

Confidence: moderate.

APPENDIX A · DETAILED QUALIFICATION OPPORTUNITIES

A2

Professional Engineering

RELATIONSHIP	TYPE / LEVEL	EVIDENCE
Extension Opportunity	**Master's · L9 · 180 pts**	**Strong**
CONFIRMED COVERAGE	DEVELOPMENT	RECOMMENDATION
65 / 180 pts · 36.1%	**Significant**	**Conditional — validation required**

Opportunity overview

The opportunity is a taught, professional-entry engineering Master aimed at learners needing a professional/accreditation-oriented pathway rather than an engineering-management qualification. The supplied research identifies a regional online supply gap and strong workforce need, but also makes clear that the MProfEng label carries accreditation expectations.[1]

Market evidence

NEW ZEALAND Supplied research identifies only one MProfEng benchmark in New Zealand and no online option. It also reports growing postgraduate engineering enrolments and sustained demand for highly skilled engineering professionals. Exact-title search demand is modest: approximately 30 monthly NZ searches for "master of professional engineering", compared with 260 for "master of engineering".[1][2]

AUSTRALIA Exact-title search volume is substantially higher in Australia at approximately 480 monthly searches, and the competitor environment contains mature professional engineering programmes but no comparable online option in the supplied scan.[3][4]

INTERNATIONAL The same keyword comparison reports very low exact-title volumes in the US, UK and Canada, suggesting that the "Professional Engineering" naming convention is regionally specific. Broader engineering demand remains strong in the supplied Studyportals evidence.[3][5]

Competition

NZ supply is limited; Australian professional engineering provision is more mature.[1][2][3][4]

Skills & technology

Supplied research explicitly identifies long-term demand and shortage conditions for professional engineers and highlights professional accreditation/CPEng relevance. Green List alignment is direct at the occupation level. Tier 1 records include Civil Engineer (233211), Mechanical Engineer (233512), Environmental Engineer (233915) and other engineering roles. Their supplied requirements include a Washington Accord-accredited initial engineering degree, a BE(Hons), an accepted Level 7+ qualification with Engineering New Zealand evidence, or CPEng registration. This is a workforce-relevance signal only. A new UCO Master must not be assumed to satisfy these Green List requirements unless Engineering New Zealand/accreditation evidence confirms that relationship.[6][7][8][9]

Target learner

Target learners are engineering graduates whose prior qualification does not provide the desired professional-recognition pathway, plus career/specialisation changers where academically appropriate.

Evidence assessment

Strong

Workforce, enrolment, competitor and search evidence are consistent on the professional-engineering need and regional supply gap, while exact programme-search demand remains a caution.

A2 · PROFESSIONAL ENGINEERING

PORTFOLIO & FEASIBILITY

RECOMMENDATION

Conditional — validation required

Complete a formal accreditation/technical feasibility assessment before any detailed curriculum design.

Key concerns

Validation Required

Accreditation, professional recognition and online practical requirements require formal validation.

Validation Required

The current portfolio lacks the discipline-specific technical depth needed for a coherent pathway.

Existing course alignment[10]

COURSE / POINTS / STATUS	CAPABILITY ALIGNMENT
EMGT602 15 pts · Build Complete — current Engineering Knowledge Management	Research methods, engineering evidence analysis and data communication
EMGT605 15 pts · Build Complete — current Sustainability Systems in Engineering	Engineering systems, sustainability and cultural/contextual capability
EMGT606 15 pts · Build Complete — current Technology Development, Application and Transfer	Technology appraisal, responsible innovation and professional strategic application
EMGT610 20 pts · Build Complete — current Engineering Project Management	Complex engineering project planning, delivery, risk and stakeholder engagement

Alignment notes

EMGT680 may be relevant as a project course but is Scoping and does not provide supplied learning outcomes in the catalogue used here; it is therefore not counted as confirmed aligned coverage.

Portfolio coverage

36.1% **65 / 180 points**

Confirmed relevant coverage

0% 100%

Capability coverage

useful professional/management/sustainability foundation, but weak for discipline-specific engineering science, design and accreditation formation.

Coherence

current courses are primarily engineering-management courses and cannot alone form the proposed professional engineering pathway.

Key development gaps

Discipline-specific engineering depth and design

The supplied market/competitor evidence describes professional programmes as broad, multi-specialisation and practice-heavy.[4]

Development: substantial indicative discipline-specific advanced engineering provision and coherent specialisation pathways.

Accreditation/professional-recognition requirements

The market evidence and Green List requirements make accreditation/recognition central to the value proposition.

Development: formal Engineering NZ/accreditation mapping before naming or launch decisions.

Practice/project component

Current aligned courses do not establish the required practicum/industry placement/design-project model described in the competitor evidence.

Development: indicative applied professional engineering project/practice component, subject to academic and accreditation validation.

APPENDIX A · DETAILED QUALIFICATION OPPORTUNITIES

A3

Public Health

RELATIONSHIP	TYPE / LEVEL	EVIDENCE
New Opportunity	Master's · L9 · 180 pts	Moderate
CONFIRMED COVERAGE	**DEVELOPMENT**	**RECOMMENDATION**
0 / 180 pts · 0.0%	Significant	Recommended for further investigation

Opportunity overview

A Level 9 Master of Public Health is supported by a clear New Zealand qualification-search and enrolment signal. The strategic difficulty is not market identification but portfolio readiness.

Market evidence

NEW ZEALAND

"Master of public health" averages approximately 480 monthly searches, stable over the last three years and higher than PGDip/PGCert public-health terms. NZ university MPH EFTS remained roughly 90–110 over five years, and 79% of 2025 MPH EFTS were domestic.[1]

AUSTRALIA

The supplied comparison dataset shows established Australian MPH provision and common curriculum themes including epidemiology, biostatistics, health promotion, health policy, Indigenous health, health economics and implementation/evaluation. It is useful competitive context but does not directly quantify Australian learner demand.[2]

INTERNATIONAL

The supplied UC data shows international interest/enrolment in UC's MPH context, but this does not establish demand for a fully online UCO qualification. Insufficient evidence to determine international online demand at the same confidence as the NZ finding.

Competition

NEW ZEALAND
High

The comparison includes Auckland, Otago, AUT and Massey; Massey provides distance delivery.[3]

AUSTRALIA
High

James Cook, Deakin, Sydney and Melbourne are included as substantial comparators with broad public-health curriculum coverage.[2]

Skills & technology

The recurring capability pattern across the supplied competitor evidence is epidemiology, biostatistics, prevention/health promotion, policy and health systems, equity/Indigenous health, research/evaluation and public-health leadership. No credible general Green List occupation match is claimed. A Green List entry for public-health dentistry is registration-specific and does not support a general MPH alignment.[4]

Target learner

Target learners are health-sector and adjacent professionals seeking population-level prevention, policy, equity and evidence capability.

Evidence assessment

Moderate

The NZ case is strong, but AU/international demand evidence is less complete and the main research source is qualification-specific rather than independently corroborated across multiple recent market sources.

A3 · PUBLIC HEALTH

PORTFOLIO & FEASIBILITY

RECOMMENDATION

Recommended for further investigation

Proceed only to an academic capability-gap and delivery-feasibility study; do not move directly to programme design.

Key concerns

Validation Required

No confirmed advanced Public Health course points are currently counted.

Insufficient Evidence

International online learner demand is not established to the same confidence as the New Zealand case.

Existing course alignment[5]

COURSE / POINTS / STATUS	CAPABILITY ALIGNMENT
PUBH421 15 pts · Not Started — not counted Hauora Māori	Strong alignment to Māori health, inequity and Te Tiriti
PUBH422 15 pts · Not Started — not counted Health Systems in Action: Policy, Innovation and Equity	Strong policy, prevention, systems and equity alignment
HLTH464 30 pts · On Hold — not counted Research Approaches for Health and Sport	Potential advanced research-methods alignment; supplied outcomes unavailable
HLTH302 15 pts · Not Started — not counted Evidence in Health	Evidence/policy foundation; Level 7 suitability requires validation
HLTH312 15 pts · Not Started — not counted Health Planning, Implementation and Evaluation	Planning/evaluation foundation; Level 7 suitability requires validation

Portfolio coverage

0.0% **0 / 180 points**

Confirmed relevant coverage

0% 100%

Capability coverage

not sufficient to establish an advanced MPH pathway.

Coherence

not currently established.

Adjacent provision not counted

90 points listed above are Not Started or On Hold and/or require level/capability validation.

Key development gaps

Advanced epidemiology and biostatistics

These are recurring core capabilities in the supplied competitor comparison.

Development: indicative Level 8/9 epidemiology and biostatistics capability.

Advanced public-health policy, systems, equity and Hauora Māori

PUBH421/422 are directly aligned but Not Started.

Development: complete/validate these capabilities or equivalent advanced provision.

Applied public-health planning, evaluation and research

Current relevant advanced research provision is On Hold and lower-level health planning/evidence courses are Not Started.

Development: coherent applied research/evaluation pathway.

APPENDIX A · DETAILED QUALIFICATION OPPORTUNITIES

A4

Professional Accounting

RELATIONSHIP	TYPE / LEVEL	EVIDENCE
New Opportunity	Master's · L9 · 180 pts	Moderate
CONFIRMED COVERAGE	**DEVELOPMENT**	**RECOMMENDATION**
15 / 180 pts · 8.3%	Significant	Conditional — validation required

Opportunity overview

The supplied evidence supports continued investigation of an online conversion-oriented Master of Professional Accounting, particularly if differentiated through auditing, financial management, analytics/AI and professional recognition. The market is nevertheless mature and highly competitive.

Market evidence

NEW ZEALAND

Broader "professional accounting" search interest rose from late 2025; domestic Level 9 accountancy enrolment is comparatively stable; and accounting-related job vacancies showed improvement in early 2026 after substantial declines through much of 2024–25. Online-specific accounting study search remains low.[1]

AUSTRALIA

Broader search interest is stronger than in New Zealand, and the supplied scan identifies a gap among Go8 universities for directly comparable online professional-accounting provision, although multiple non-Go8 online providers already compete.[2]

INTERNATIONAL

The supplied Studyportals slice reports 51,857 online-only pageviews across accounting-related subdisciplines, but an opportunity measure of 0.4 and substantial decline in India; the US shows some improvement.[3]

Competition

NEW ZEALAND
High

Professional accounting Master's programmes are widely available; Massey, Lincoln and Victoria offer online options. Professional recognition with CA ANZ/CPA Australia is treated as a market expectation.[4]

AUSTRALIA
High

Deakin, CQUniversity, Charles Sturt, UNE and Torrens provide flexible/online alternatives; Go8 providers are campus-based.[5]

Skills & technology

The market source identifies auditing and financial management as stronger opportunity specialisations and proposes digital/accounting technology, analytics and AI as differentiation opportunities. Green List workforce relevance exists for 221213 External Auditor and 221214 Internal Auditor, both Tier 1. Their supplied Green List requirement is remuneration-based; the dataset does not establish that a specific accounting qualification is required.[6][7][8]

Target learner

Target learners are graduates from non-accounting or adjacent disciplines seeking professional accounting conversion and career progression.

Evidence assessment

Moderate

Multiple indicators support a real market, but online-specific intent is weak, international dependence is risky and competition is mature.

A4 · PROFESSIONAL ACCOUNTING

PORTFOLIO & FEASIBILITY

RECOMMENDATION

Conditional — validation required

Advance only if Business confirms strategic appetite for substantial new professional-accounting development and a credible differentiation/accreditation strategy.

Key concerns

Validation Required

Professional-recognition requirements and differentiation from existing campus provision require validation.

Validation Required

High competition and only 15 confirmed points mean substantial new accounting-course development is needed.

Existing course alignment[9]

COURSE / POINTS / STATUS	CAPABILITY ALIGNMENT
ACCT601 15 pts · Build Complete — current Accounting and Financial Information	Financial reporting, cost concepts, budgeting, ethics and sustainability

Alignment notes

MBAS601 is relevant to financial decision-making but is Not Started, so it is not counted. Generic analytics courses may support differentiation but do not substitute for professional accounting content.

Portfolio coverage

8.3%

15 / 180 points

Confirmed relevant coverage

0% 100%

Capability coverage

foundational accounting only.

Coherence

insufficient for a professional accounting qualification.

Key development gaps

Material capability gaps

Material gaps include advanced financial reporting, audit/assurance, taxation, professional regulation/ accreditation, accounting systems/technology and a coherent applied professional pathway.

APPENDIX A · DETAILED QUALIFICATION OPPORTUNITIES

A5

Business Information Systems

RELATIONSHIP	TYPE / LEVEL	EVIDENCE
Extension Opportunity	**Master's · L9 · 180 pts**	**Moderate**
CONFIRMED COVERAGE	**DEVELOPMENT**	**RECOMMENDATION**
55 / 180 pts · 30.6%	**Moderate**	**Conditional — validation required**

Opportunity overview

A Master of Business Information Systems could occupy the space between UCO's data/technical programmes and business/management portfolio, focusing on digital transformation, information-systems governance, business analysis, data-informed decision-making and technology-enabled change.

Market evidence

NEW ZEALAND
Level 9 Information Systems domestic enrolments have remained around 200 annually, while international enrolments increased substantially to 1,540 in the supplied period. Exact MBIS/study-specific search awareness is low. Relevant IS/ICT vacancy indicators improved from late 2025 after significant prior declines.[1]

AUSTRALIA
Study-specific MBIS-related terms are more visible than in New Zealand, and direct competitors use business–technology positioning, AI, business intelligence, data governance and applied projects.[2][3]

INTERNATIONAL
The source reports strong international enrolment growth but declining online Business Information Systems pageviews across major origin markets.[4]

Competition

NEW ZEALAND
Moderate
Waikato and Victoria are identified as key online alternatives; other related programmes are more campus-based. Australia: Moderate–High. Multiple established MBIS/IT/business-tech providers offer specialist pathways and accreditation/professional positioning.[4][3]

AUSTRALIA
Moderate–High
Multiple established MBIS/IT/business-tech providers offer specialist pathways and accreditation/professional positioning.[4][3]

Skills & technology

Required market capabilities include technical plus business skills, business analysis, information-systems management, digital transformation, security, business intelligence, project management and emerging technology. Green List relevance is role-specific rather than qualification-specific. For example, ICT Project Manager (135112) is Tier 1 but its supplied requirement is remuneration and, for certain contract-for-services cases, experience; the dataset does not establish that an MBIS qualification is required.[5][6]

Target learner

Target learners include business graduates/professionals needing deeper digital systems capability and technical learners moving toward analysis, consulting, systems or transformation roles.

Evidence assessment

Moderate

There is a credible business-tech market, but exact-title demand is weak and recent global online trend is mixed.

A5 · BUSINESS INFORMATION SYSTEMS

PORTFOLIO & FEASIBILITY

RECOMMENDATION

Conditional — validation required

Validate target learner, naming and differentiation against MADS/MBA before starting new course development.

Key concerns

Validation Required

Target learner, naming and differentiation from MADS and MBA require validation.

Validation Required

Core Information Systems capability and Level 9 integration remain incomplete.

Existing course alignment[7][8]

COURSE / POINTS / STATUS	CAPABILITY ALIGNMENT
MBIS622 15 pts · Build Complete — current IS Security and Risk Management	Direct IS risk, security, governance and organisational threat capability
DATA401 15 pts · Build Complete — current Introduction to Data Science	Data-science literacy and applied analytical capability
PMGT601 15 pts · Build Complete — current Foundations of Project Management and Advanced Stakeholder Engagement	Delivery methodology, stakeholder management and implementation capability
PHIL426 10 pts · Build Complete — current Data Ethics	Data ethics, data sovereignty and responsible data use

Alignment notes

Additional adjacent courses: - MBIS601 Management of Information Systems — 15 points, Not Started; strong direct capability alignment but not counted. - MBIS623 Data Management — 15 points, Build Complete; likely relevant by title/programme context, but no learning outcomes are supplied, so capability alignment is not confirmed and it is not counted.

Portfolio coverage

30.6%

55 / 180 points

Confirmed relevant coverage

0% 100%

Capability coverage

useful security/data/project/ethics foundation; insufficient direct coverage of core information-systems strategy, enterprise systems, business analysis, architecture/process and digital transformation.

Coherence

requires new core IS spine.

Key development gaps

Core information-systems strategy and digital transformation

MBIS601 would address much of this but is Not Started.

Development: complete/validate equivalent core IS capability.

Business/systems analysis and enterprise/process capability

Not sufficiently covered by current confirmed courses.

Development: indicative advanced business/systems analysis and process/enterprise systems provision.

Applied Level 9 integration

No clearly mapped MBIS-specific capstone or consulting project is confirmed.

Development: applied industry/consulting/research integration appropriate to Level 9.

APPENDIX B

Portfolio Findings

Portfolio implications drawn from the supplied analysis.

B1 Reusable capability clusters

Digital/data governance cluster. MBIS622, DATA401 and PHIL426 provide a reusable current foundation across MBIS and Digital Health. Their value is highest as supporting capability; they do not replace domain-specific programme cores.[1]

Applied research cluster. OPSY622/OPSY630 provide strong applied research capability for psychology, while EMGT602 supports engineering research/evidence practice. These are domain-shaped and should not be assumed fully transferable to unrelated qualifications without academic review.[2]

Engineering professional-practice cluster. EMGT605, EMGT606 and EMGT610 are high-value current courses for engineering sustainability, technology application and project practice, but they do not supply the discipline-specific technical formation expected of a Professional Engineering pathway.[3]

B2 Repeated gaps

Level 9 integrative/capstone capability recurs as a gap for Public Health, MBIS, Professional Accounting and Professional Engineering. Existing capstones are generally tied to their current programmes and cannot be assumed reusable.

Domain-specific professional cores are the largest constraint on new opportunities. UCO has broad cross-cutting data, project, leadership and research capability, but comparatively little current provision in professional accounting, public health and professional engineering technical formation.

Health-course abundance is misleading for Public Health feasibility. Much of the current Health portfolio is Nursing, Clinical Exercise Physiology, Professional Supervision, Counselling or trauma-related. These points do not automatically align to population health, epidemiology, biostatistics, public policy or health-promotion capabilities.

B3 High-leverage development possibilities

The strongest potential multi-opportunity development area is advanced data governance/implementation in regulated professional contexts, because MBIS and Digital Health both require stronger systems implementation, governance and organisational-change capability. This should remain domain-sensitive rather than become a generic course added solely to increase points.

A second high-leverage area is advanced applied research/evaluation, but only if designed with enough flexibility to support multiple professional domains while preserving programme-level coherence.

B4 Cross-faculty combinations

Programme ownership should remain a later human decision.

- Psychology: Science + potentially Arts/Business/Health for evaluation, policy, behavioural or user-research contexts.
- MBIS: Business + Engineering/Data + Arts ethics.
- Digital Health: Health + Business/IS + Data/Engineering + Arts ethics.
- Professional Engineering: Engineering plus existing engineering-management/project capability.

B5 Portfolio lifecycle effect

The course catalogue contains:

This means apparent thematic availability frequently overstates confirmed reusable coverage. The analysis therefore does not count Scoping, Not Started or On Hold courses as confirmed current/in-development points.

- 96 Build Complete
- 33 Design & Build
- 1 QA/Testing
- 15 Scoping
- 83 Not Started
- 24 On Hold

B6 UCO product findings

Existing Portfolio

Master of Organisational Psychology

Code: MOrgPsyc · UCO status: Delivering/BAU · Approval: Fully Approved

Market opportunity: Organisational Psychology

Current psychology evidence supports applied/non-clinical demand, while the latest market study notes growth in Organisational Psychology partly driven by UC's own programme. This supports BAU but also creates a differentiation constraint for any broader psychology extension.[4]

Master of Project Management

Code: MPM · UCO status: Delivering/BAU · Approval: Fully Approved

Market opportunity: Project Management

Project Management appears among high-demand specialised online Master's programme names in the broad market corpus. The finding supports existing provision rather than a new qualification.[5]

Pipeline

Master of Applied Artificial Intelligence

Code: MAAI · UCO status: Building · Approval: Fully Approved

Market opportunity: Applied Artificial Intelligence

Broad market evidence strongly supports AI as a high-interest, cross-disciplinary field, although overall online Master's demand is becoming more selective. This supports the direction rather than creating a new opportunity.[6]

Master of Software Engineering

Code: MSE · UCO status: Scoping · Approval: Faculty Approval

Market opportunity: Software Engineering

Software Engineering is regionally relevant but appears in high-potential/declining-demand groupings in the broad Studyportals analysis; continue validation rather than treat as a newly discovered opportunity.[7]

PG Cert in Geospatial Data Science

Code: PGCertGDS · UCO status: Exploration · Approval: Early Warning

Market opportunity: Geospatial Data Science

Specific GDS search demand is very low and GIS has much stronger recognition; labour-market evidence is mixed. The exploration direction is plausible but requires continued market validation.[8]

Master of Business Administration (Online)

Code: MBAS · UCO status: Building · Approval: Fully Approved

Market opportunity: Business Administration

Broad Business demand remains large but generic MBA/Business demand has declined in the supplied Studyportals period; success depends on differentiation and market targeting.[9]

Master of Sustainable Futures and Innovation

Code: MSFI · UCO status: Building · Approval: Fully Approved

Market opportunity: Sustainable Futures / Innovation

Environmental and sustainability-related fields show positive demand signals and interdisciplinary relevance; evidence generally supports the direction.[10]

Reconsideration Opportunity

Master of Cyber Security

Code: MCySec · UCO status: Review / On Hold · Approval: Not Started

Market opportunity: Cyber Security

Cybersecurity remains prominent in specialised online technology demand, but supplied regional evidence also shows cooling demand in some comparisons. Current evidence may justify reconsideration, not automatic restart.[11] [12]

Master of Teaching and Learning (Early CHildhood)

Code: MEarlyYearsEd · UCO status: Review / On Hold · Approval: Faculty Approval

Market opportunity: Early Childhood Education

Early Childhood Education is identified as one of the stronger Australia/New Zealand online Master's opportunities in the broad market analysis. Current evidence supports reconsideration, subject to why the existing product is on hold and to current portfolio strategy.[13]

Master of Engineering Technology Management

Code: METM · UCO status: Review / On Hold · Approval: Not Started

Market opportunity: Technology Management

The broad market report describes Technology Management as an emerging opportunity but increasingly crowded. Reconsideration would require differentiation and structural validation; the catalogue's 120-point existing record must not be used as the governing size for a new Master under this analysis.[14]

APPENDIX C

Other Opportunities Considered

C1 Additional Analysed Opportunities

Digital Health / Health Information Management

Extension Opportunity · Emerging Strategic Opportunity

Qualification: Postgraduate Diploma · Level 8 · 120 points

Evidence: Moderate · Confirmed coverage: 40 / 120 points · 33.3% · Development: Moderate

Recommendation: **Conditional — validation required**

Opportunity summary

The evidence favours a shorter postgraduate professional-upskilling pathway rather than a Master's. "Digital Health" is the strongest terminology in the supplied NZ and global evidence, and "postgraduate diploma in digital health" has the strongest specific NZ postgraduate search signal among the tested terms.[1]

Existing foundation

The 40 confirmed points cover data, security and ethics; health-domain systems, implementation and applied practice remain gaps.[2] [3]

Next action

Conduct focused employer/learner validation around "Digital Health" versus "Health Informatics/Information Management" before portfolio commitment.

C2 Deprioritised Concepts

Master of Forestry Science

Status: **Not prioritised**

Evidence: Weak · Development: Significant

The 2026 forestry research identifies UC's weak domestic postgraduate forestry demand, very low programme-search volume, small current UC enrolment, and modest global demand. It notes a potential niche through sustainability, conservation, environmental management, GIS and climate, but also practical-fieldwork constraints for fully online delivery.[4]

The supplied course catalogue does not contain a sufficient forestry-specific advanced course base. This combination of Weak market evidence and Significant new development means the opportunity is not prioritised.

Generic new online Bachelor's expansion

Status: **Not prioritised**

The broad Studyportals evidence repeatedly cautions that online Bachelor's demand is lower and more constrained than Master's demand, especially in Australia/New Zealand. It identifies selective subject opportunities but advises targeted rather than broad undergraduate expansion.[5]

Because UCO already has multiple undergraduate products in BAU, Building or Review/On Hold and because no single new Bachelor's concept produced a stronger combination of market evidence and portfolio fit than the ranked postgraduate opportunities, a generic new Bachelor's is not prioritised.

Broad standalone Design postgraduate qualification

Status: **Not prioritised**

The supplied market corpus contains design/game/cosmetic/industrial design research, but the supplied course catalogue does not provide a defensible current advanced design-course foundation. Without stronger course reuse or a clearly dominant market case relative to the ranked opportunities, this remains a lower-priority development-intensive concept.[6]

Additional short-course-led qualification concepts

Status: **Not prioritised**

The broad market evidence cautions that online short-course demand is oversupplied and declining in major markets, except where tightly linked to workforce needs or stackable pathways. No additional short-course-led qualification concept exceeded the evidence threshold for the ranked matrix.[7]

APPENDIX D

Evidence, Assurance & Sources

D1 Analysis Basis & Evidence Scope

Evidence boundary
Supplied production files only; no web or external evidence used for this fixture.

Evidence access
No web access

Geographic scope
New Zealand; Australia; Relevant international markets where supplied evidence exists

Source types included
Supplied market-research evidence; UC Online course catalogue; UC Online qualification and pipeline catalogue; Supplied New Zealand Green List records; Qualification rules defined for the analysis

Analysis date
15th October 2026

> **Source inventory supplied with the analysis**
>
> Market source blocks: **291**; Evidence families: **267**; Course records: **252**

D2 Limitations, Uncertainty & Validation

Limitations supplied with the analysis

Closed evidence boundary

This report uses only the supplied Market-Data.md, course_catalog.jsonl, qualification_catalog.jsonl, green_list_roles.jsonl and qualification/project rules in the governing prompt. No web or pretrained factual knowledge is used as evidence.

Evidence-family deduplication

The market corpus contains 291 source blocks across 267 evidence families. Related copies and extracts within the same Evidence family were not treated as independent corroboration. Visual evidence is treated as part of its source/evidence family, not as an additional source.

Studyportals measures interest, not enrolment demand

Pageviews/search behaviour are used as interest proxies in accordance with the source's own methodology and caveats. They are not described as applications, willingness to pay or confirmed enrolments unless a supplied enrolment dataset supports that claim.[1]

Geographic evidence is uneven

NZ evidence is materially stronger for Public Health, Professional Accounting, Psychology and MBIS than the corresponding Australia/international evidence. Where the source set does not directly establish learner demand in a geography, the report states that limitation rather than transferring demand from another region.

Course lifecycle interpretation is conservative

Build Complete is treated as current. Design & Build and QA/Testing are treated as in-development. Scoping, Not Started, and On Hold are not counted as confirmed current/in-development coverage. This is an analytical interpretation of supplied lifecycle labels and should be validated against UC operational definitions.

Missing learning outcomes constrain course alignment

Some potentially important courses, including HLTH402 Health Information Management, MBIS623 Data Management, EMGT604 Management in Technical Organisations and HLTH464 Research Approaches for Health and Sport, have no supplied learning outcomes. They are not counted as confirmed capability-aligned coverage where title/programme context alone would be doing the work.

Points coverage is not capability coverage

Every percentage in this report counts only selected, defensibly relevant courses and does not imply that the full graduate capability profile is met.

Proposed structures are not approved curricula

New development is described only at capability level. No new course title, learning outcome, delivery method, accreditation outcome or approval requirement is asserted as approved.

Master’s size

All new Master concepts use the governing 180-point default. Competitor 120/240-point structures and on-campus UC examples are not treated as authority for a new UCO Master. A 240-point Master would require an authoritative UC Online source explicitly confirming that structure.

Green List boundaries

green_list_roles.jsonl is used only as a workforce-relevance/status dataset. Tier is not used as a demand score. Green List membership is not described as a confirmed shortage unless separate market evidence explicitly supports shortage. The dataset does not include the separate Post-Study Work Visa qualifications section; no Post-Study Work Visa claim is made.

Registration-sensitive occupations

Psychology and professional engineering require particular caution. A qualification is not claimed to satisfy professional registration/accreditation or Green List requirements unless the supplied evidence explicitly establishes that relationship.

Portfolio catalogue absence is not proof of total institutional absence

If a concept is not in qualification_catalog.jsonl, it is treated as potentially new to the supplied UCO portfolio, not proof that no related initiative exists elsewhere in UC.

Source conflicts and data-quality issues

Some market-source visuals are cropped, blank or partially unreadable; only supplied extracted meaning was used. One Public Health GA4 narrative appears to reference September–October 2026 timing inside an August 2026 source context; that timing claim was not relied upon in the prioritisation. Similar extraction artefacts were not silently repaired.

Competition completeness

Competitor findings are bounded by the supplied scans. Failure to identify a provider does not prove that no competitor exists.

Final decision boundary

These recommendations are for further investigation, not launch approval. Academic review, accreditation/professional requirements, strategic fit, financial modelling, delivery feasibility and leadership judgement remain outside the decision boundary of this analysis.

Uncertainty summary supplied with the analysis

UNC-001 · Professional Engineering

Status: validation required Severity: high

Accreditation and professional-recognition requirements are not established by the current evidence and require formal validation before the qualification could be positioned as a professional-entry pathway.

UNC-002 · Public Health

Status: insufficient evidence Severity: medium

International online learner demand cannot be determined with the same confidence as the New Zealand finding from the supplied evidence.

UNC-003 · Course lifecycle

Status: validation required Severity: medium

The interpretation of Build Complete, Design & Build, QA/Testing, Scoping, Not Started and On Hold is conservative and should be confirmed against UC operational definitions.

UNC-004 · Digital Health

Status: limited evidence Severity: medium

Direct New Zealand study demand is limited and programme terminology remains unsettled.

Statements supplied with the analysis

The production inputs were interpreted according to their defined roles: the governing Markdown prompt as instructions, Market-Data.md as structured market evidence, the three catalogue/status files as JSONL, and arrays were preserved semantically. Market findings were identified before course construction; every ranked opportunity was checked against the UCO portfolio; confirmed portfolio percentages use only clearly current/in-development, capability-aligned courses; Green List status was kept distinct from market demand; and visible market citations use actual source filenames rather than internal source identifiers.

Where the supplied evidence could not establish a conclusion, the report either limits the claim, assigns validation, or states that the evidence is insufficient rather than resolving the gap through assumption.

D3 Publication Assurance

System checks for this published report

Input structure
The analysis input was validated against the configured JSON schema.

Analytical consistency
Repeated analytical outcome fields were checked for agreement where the renderer maintains consistency rules.

Appendix structure
Appendix page ownership, continuation identity, destination anchors and supported text bounds were validated within the scopes implemented by the renderer.

Internal citation links
Internal PDF citation links were checked for existing Source Register destinations and positive usable click areas.

Publication safeguards
PDF publication was completed through the configured guarded render path.

Internal report citations are validated against Source Register destinations. External source access is not tested by the report renderer.
